The Architecture of Assessment

Validating multiple-choice testing in an AI-enabled environment.

A structural framework for school administrators, teachers, and curriculum leaders.

The Diploma Reality

Social Studies 30-1 & 30-2

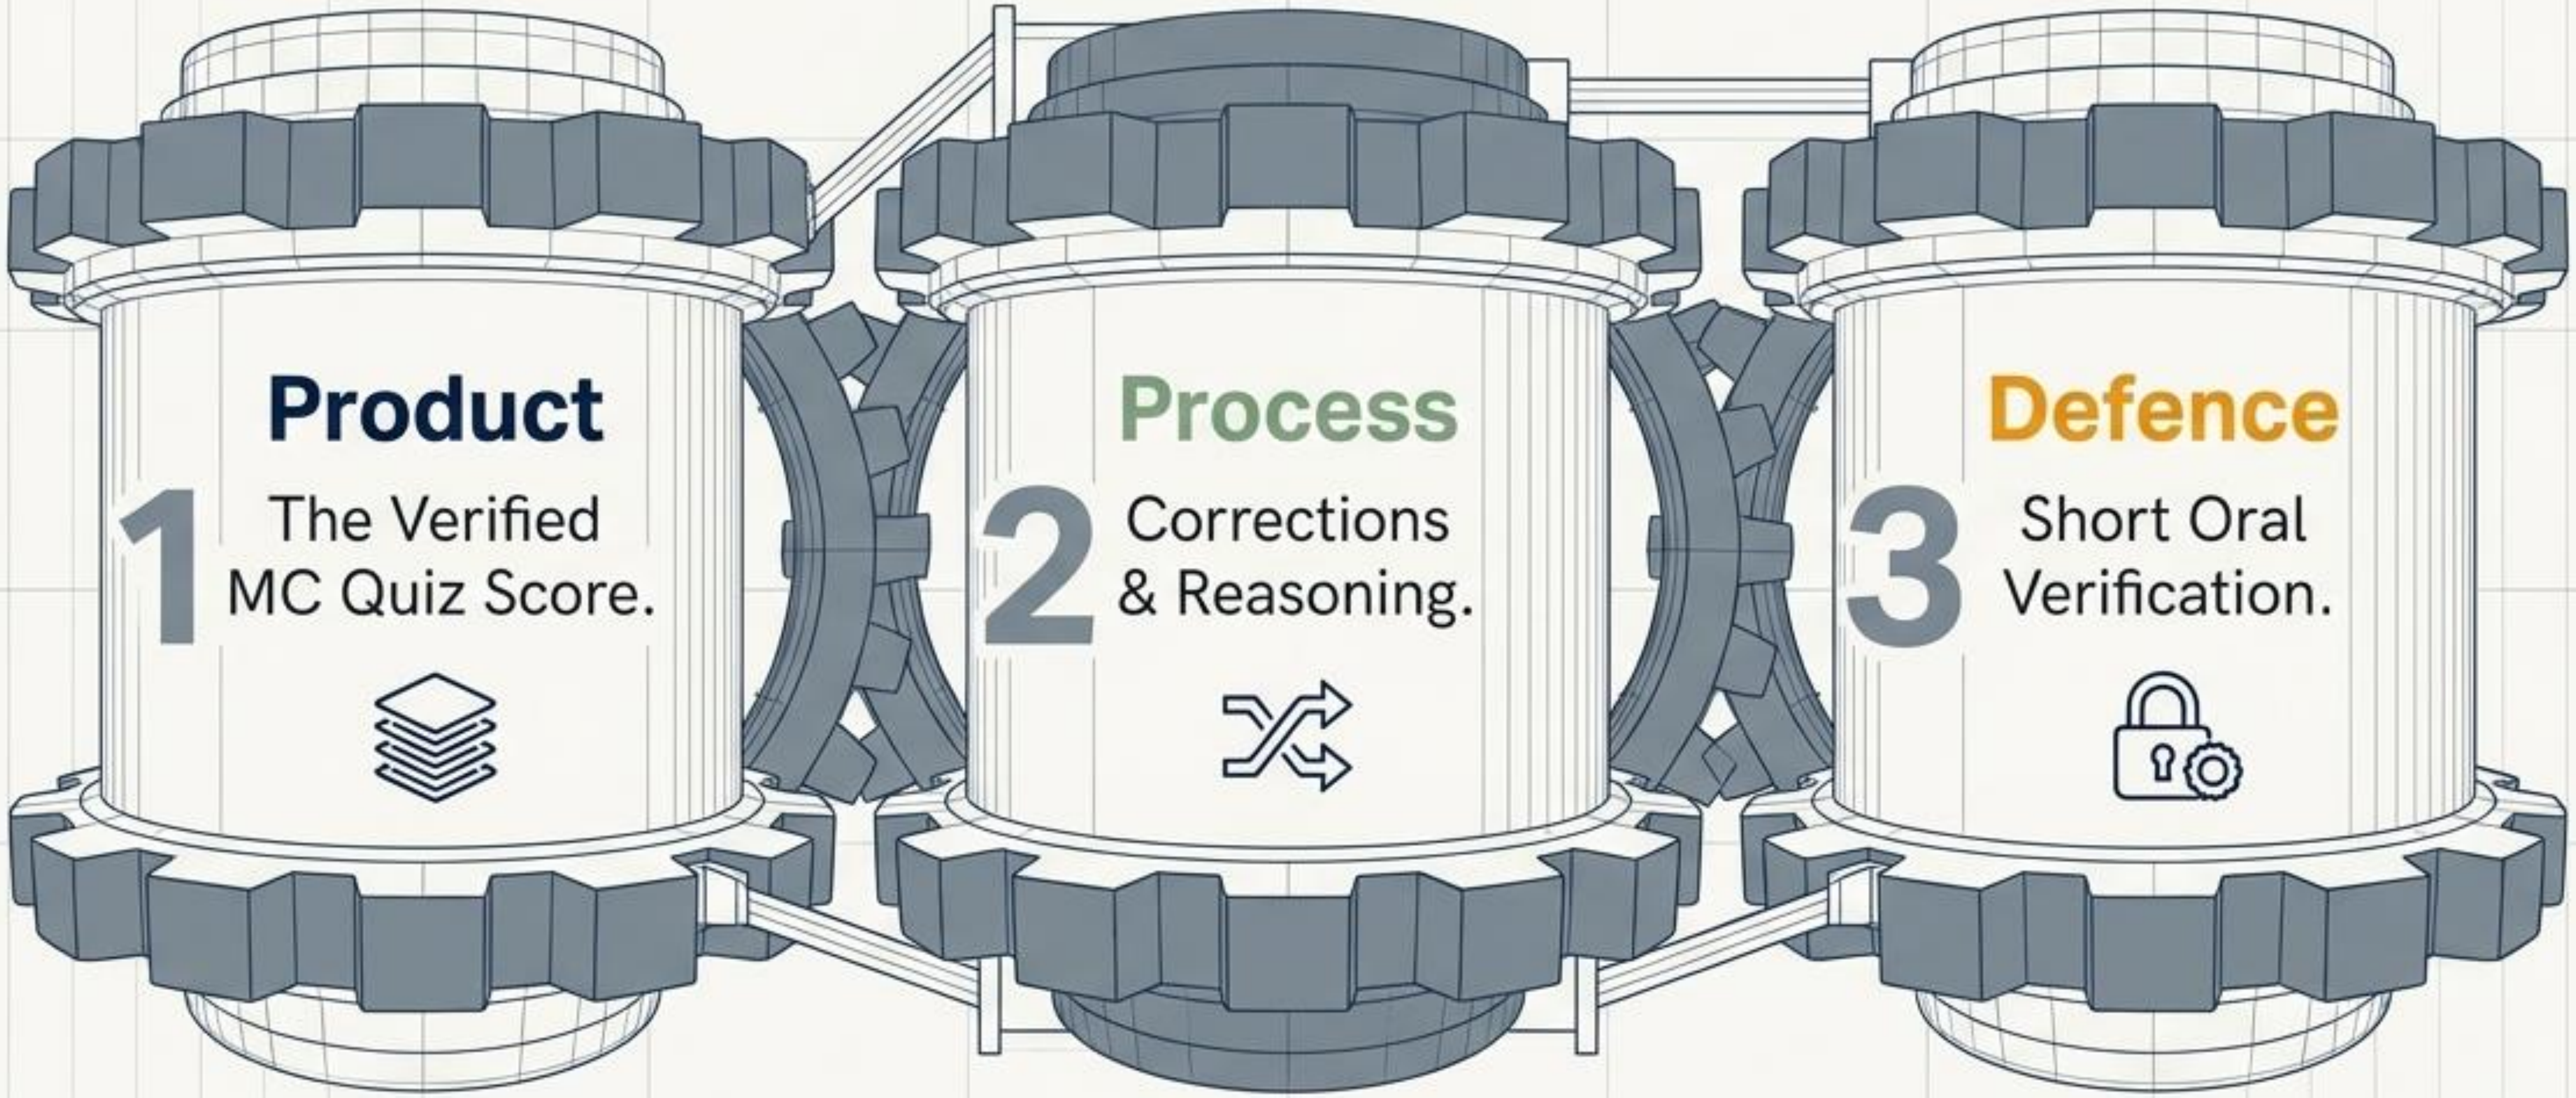
- **60** Multiple-Choice Questions
- **50%** of Diploma Exam Mark
- **30%** of Final Course Mark

The At-Home Reality

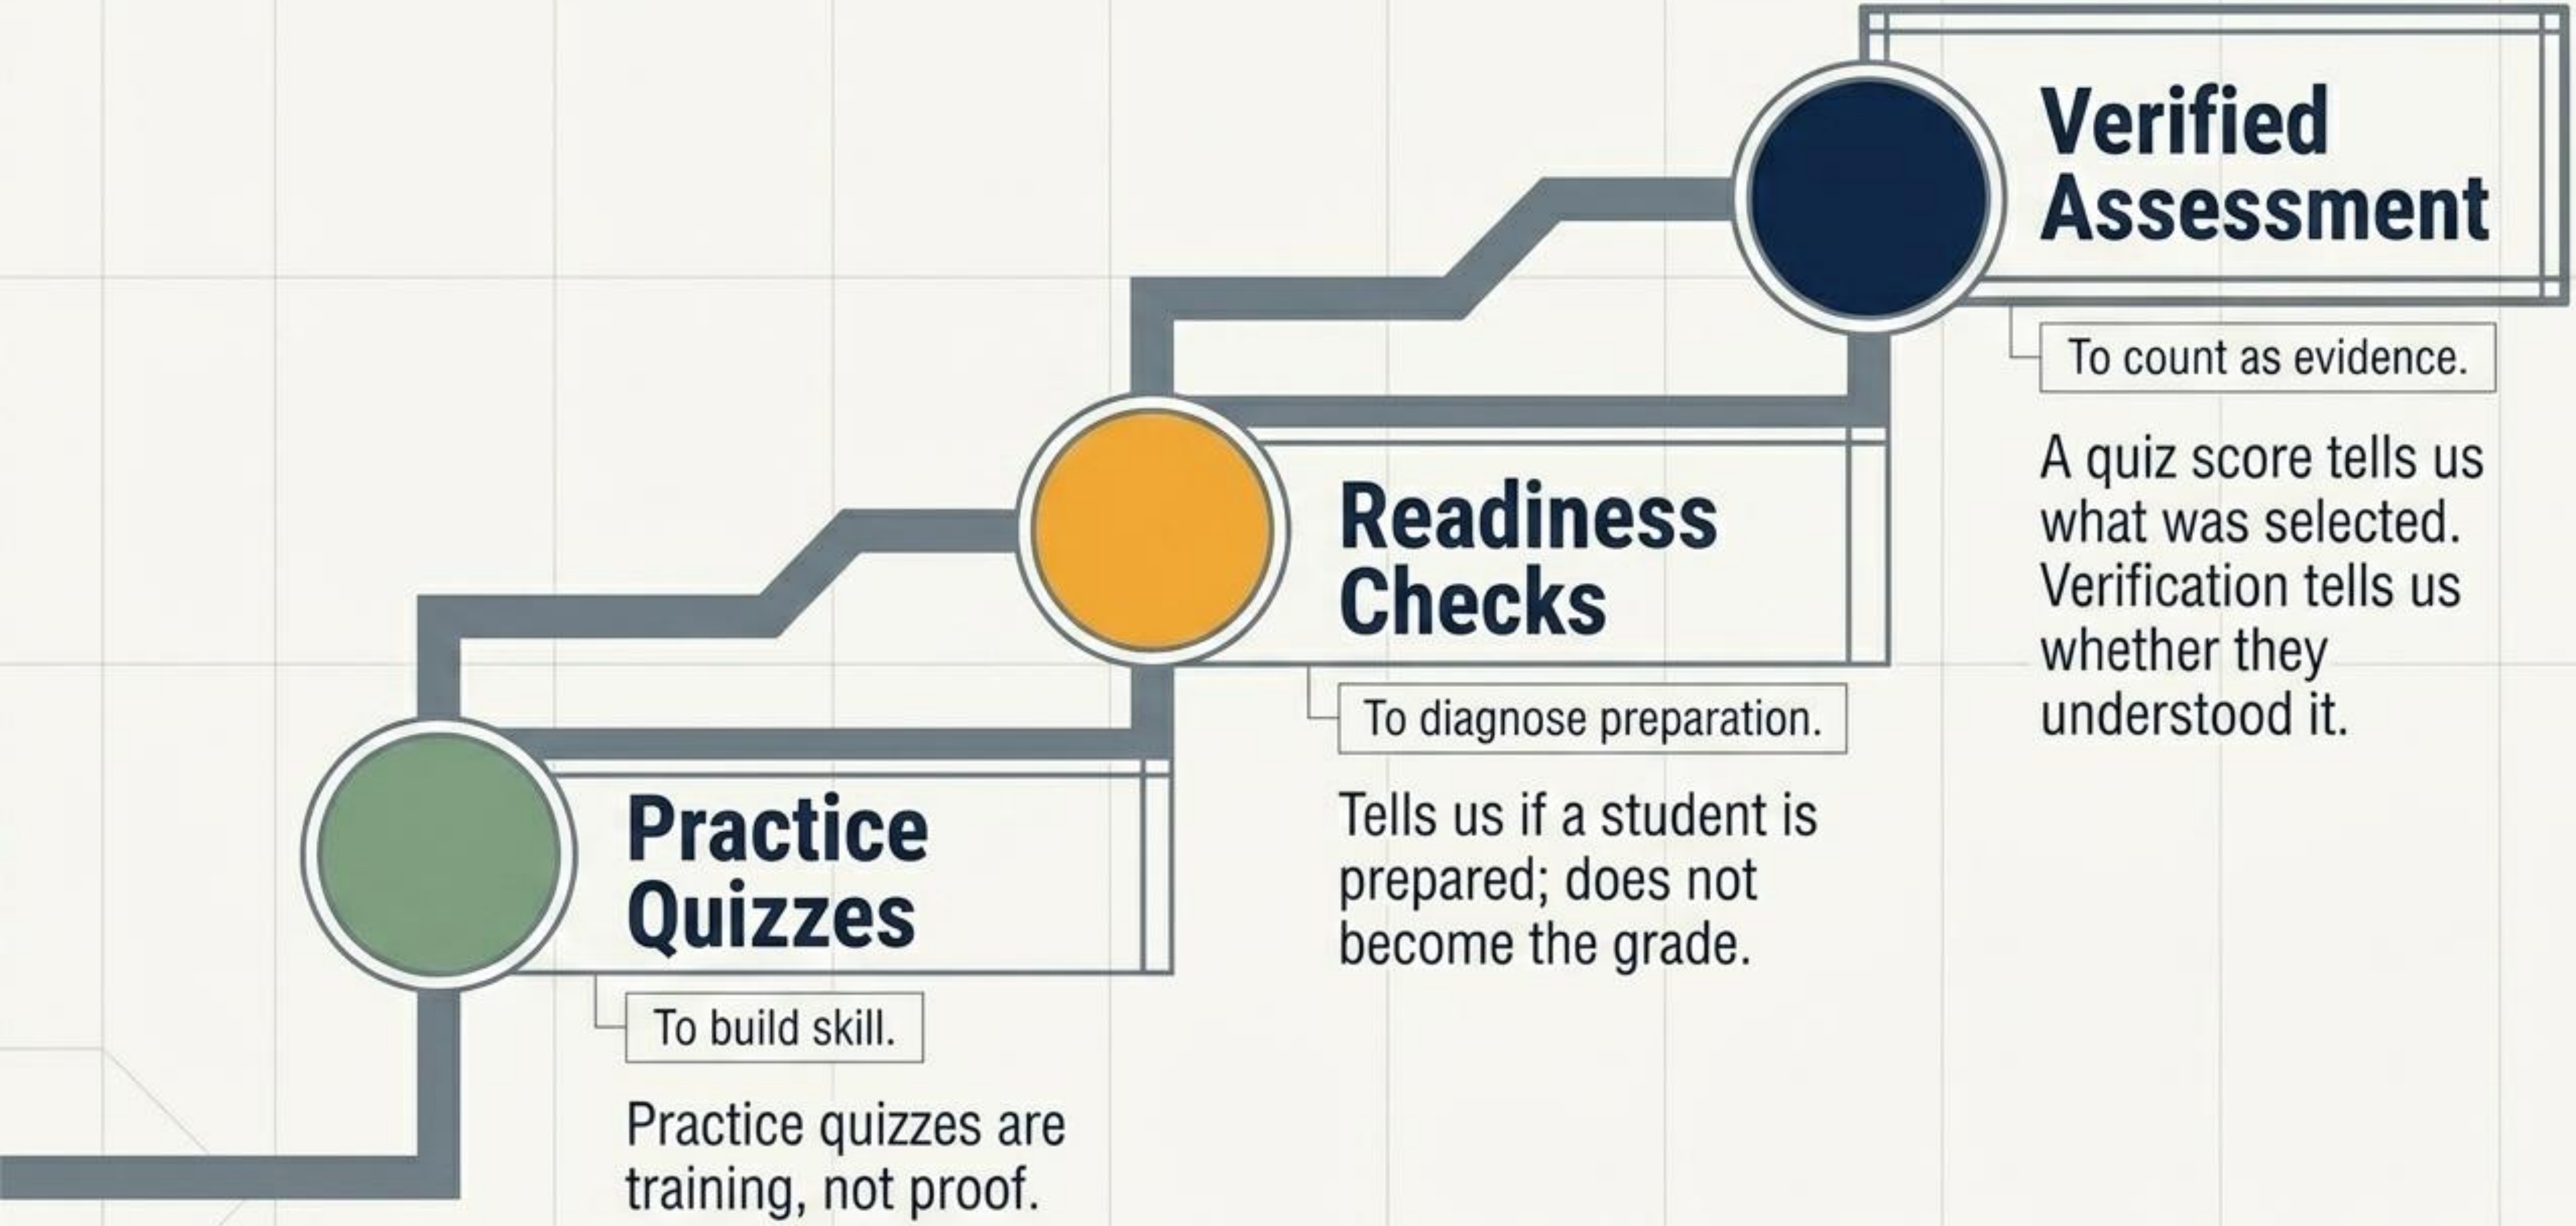
Unsupervised testing / Instant AI-access / **Impossible to definitively lock down.**

Unsupervised at-home multiple choice is not secure proof of learning by itself.

We cannot eliminate multiple choice, so we must structurally validate it.



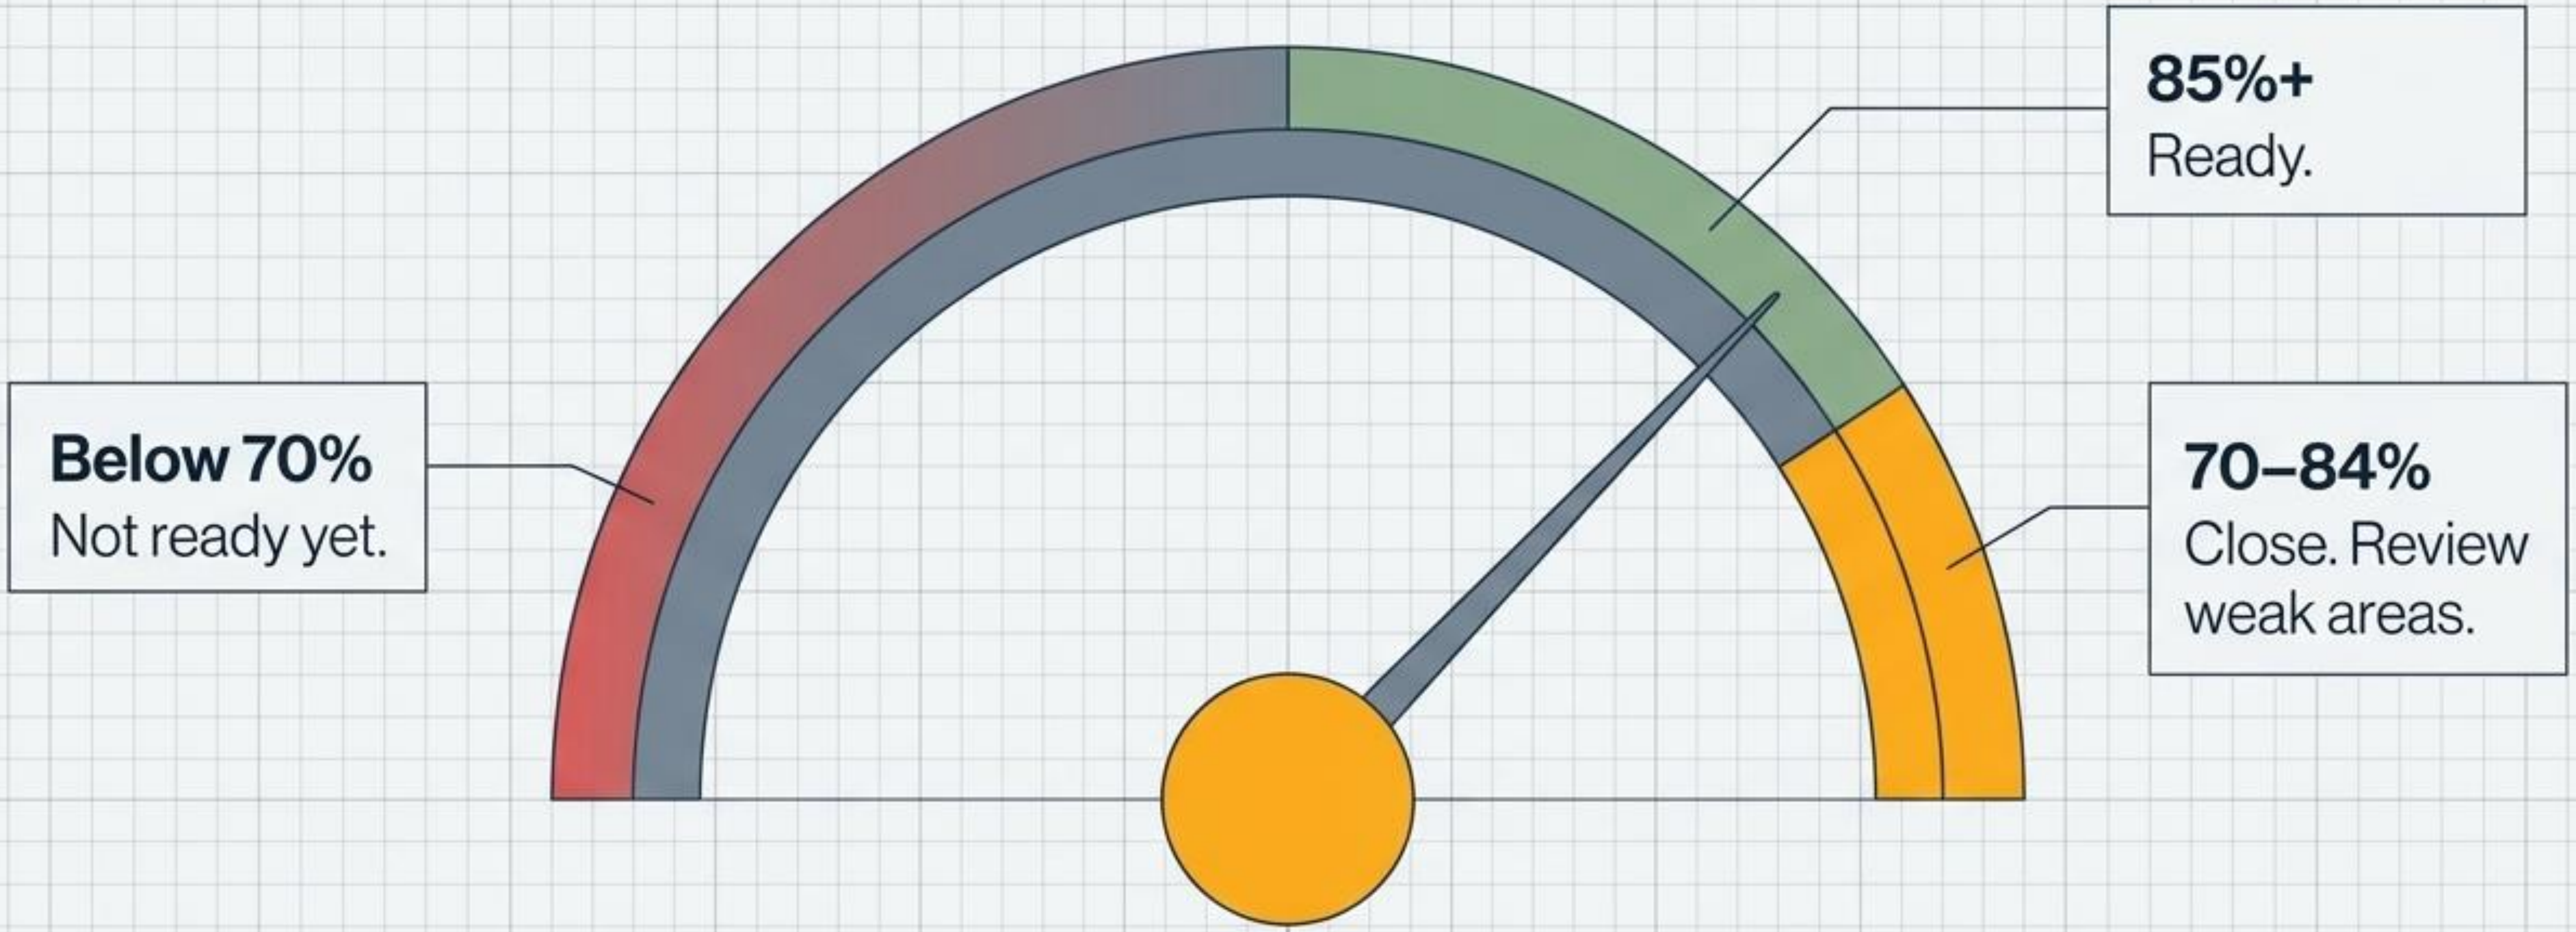
Multiple choice stays inside a robust assessment model instead of existing as a weak, standalone online quiz.



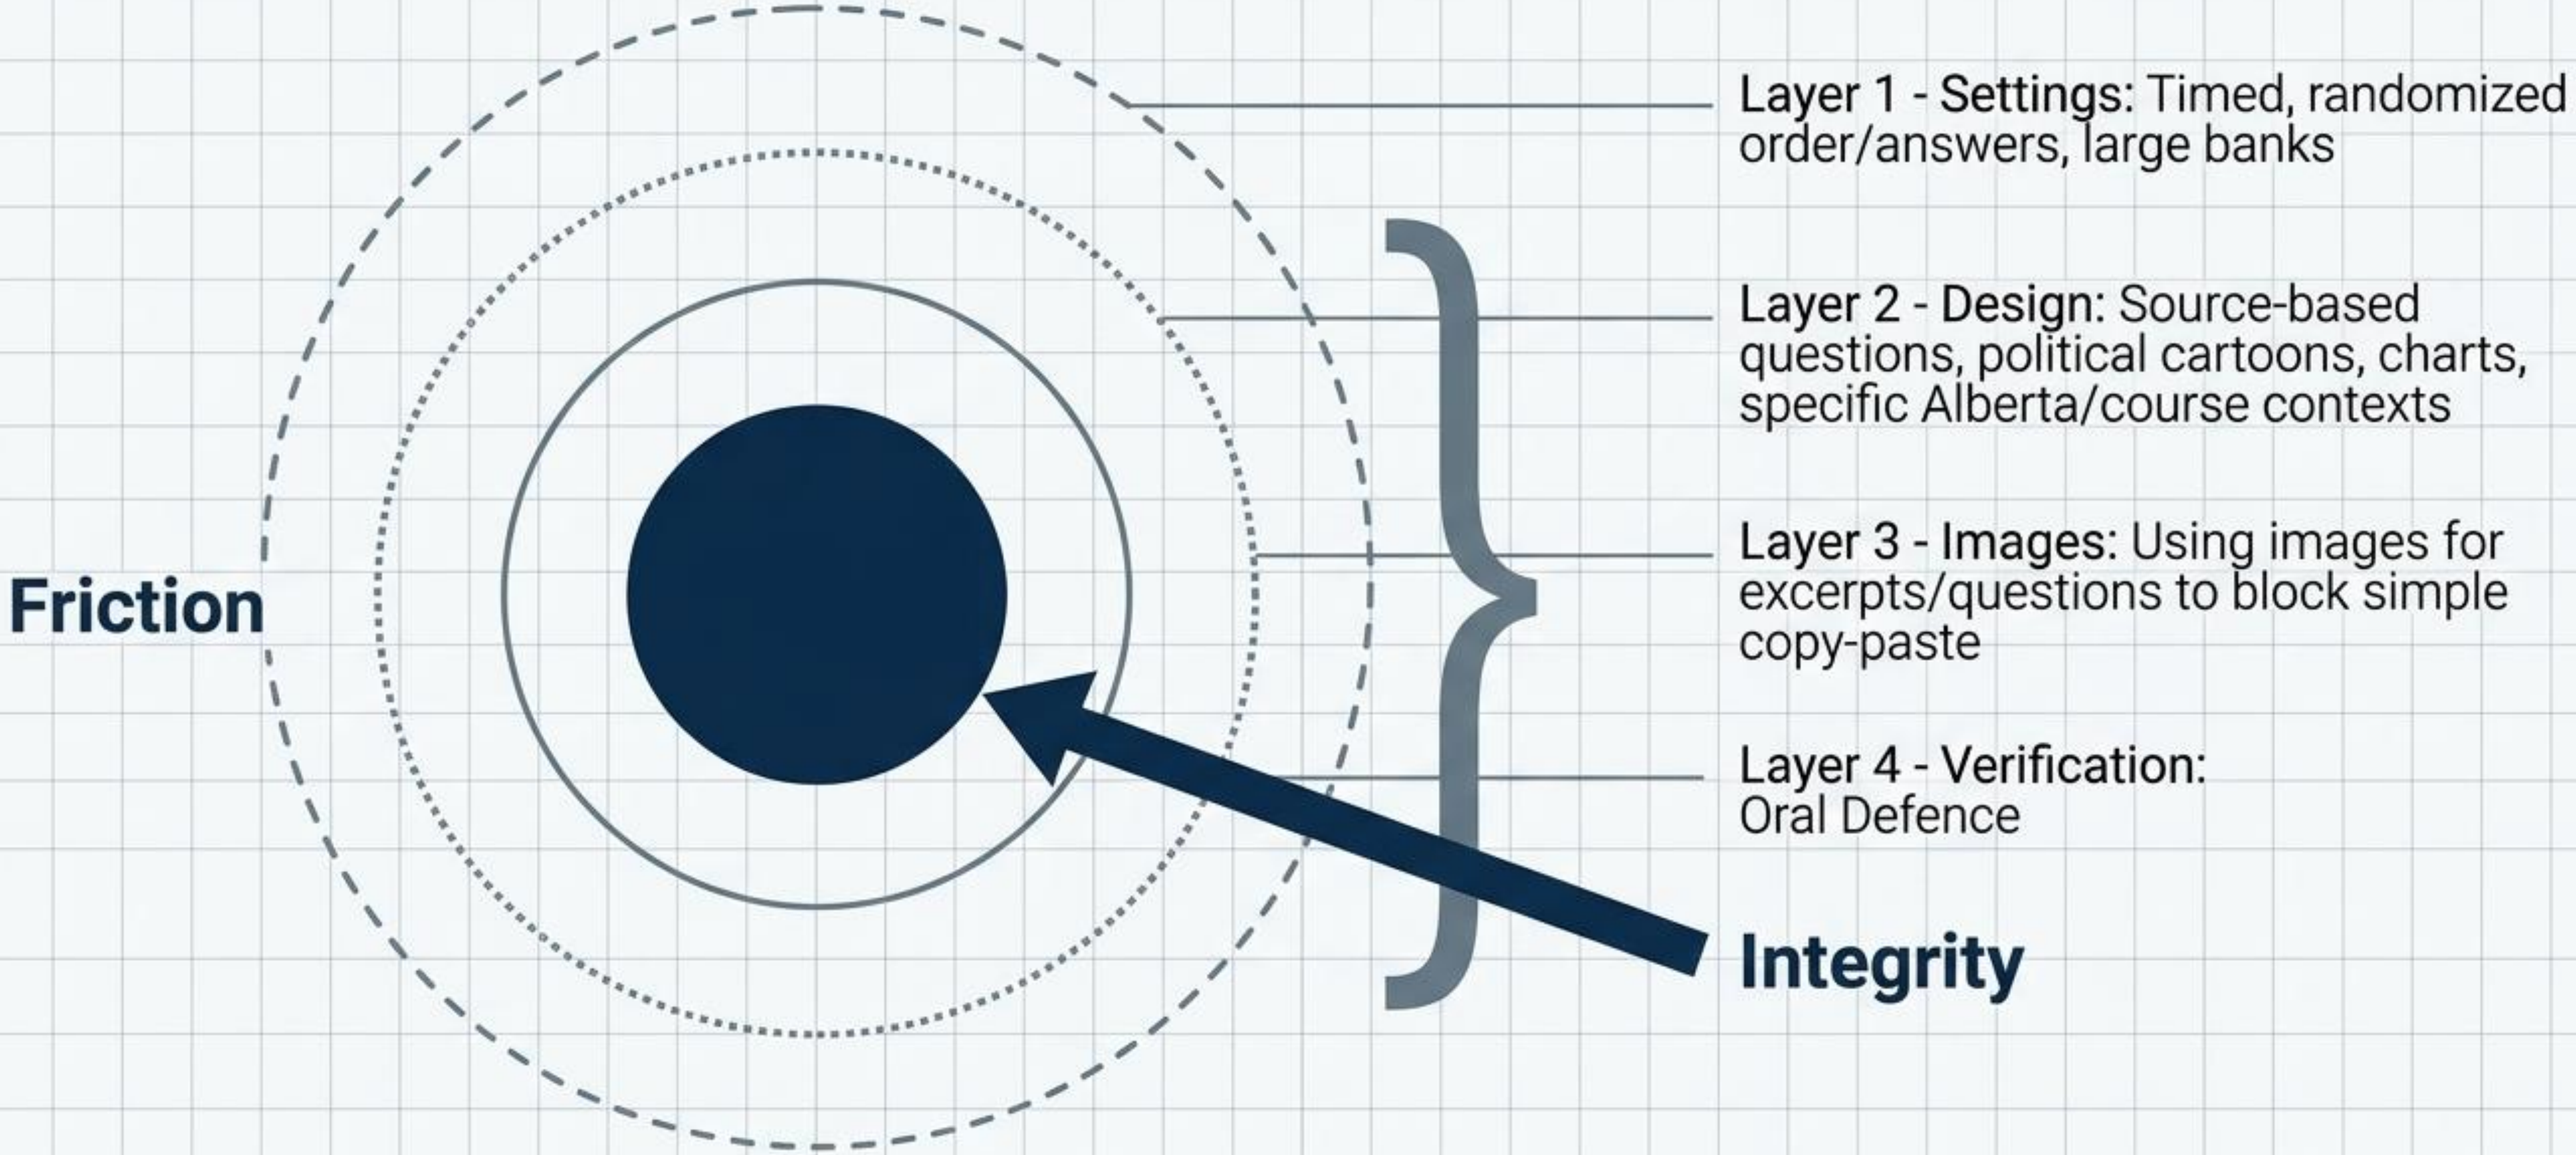
Verified Assessment
To count as evidence.
A quiz score tells us what was selected. Verification tells us whether they understood it.
Readiness Checks
To diagnose preparation.
Tells us if a student is prepared; does not become the grade.
Practice Quizzes
To build skill.
Practice quizzes are training, not proof.

	Practice (Skill)	Readiness (Diagnosis)	Verified (Evidence)
Marks	No	No	Yes
AI Allowance	Allowed	Prefer No AI	Strictly Prohibited
Attempt Limits	Multiple	Usually One	One Attempt
Feedback Timing	Immediate	Score + General Feedback	No immediate answer reveal

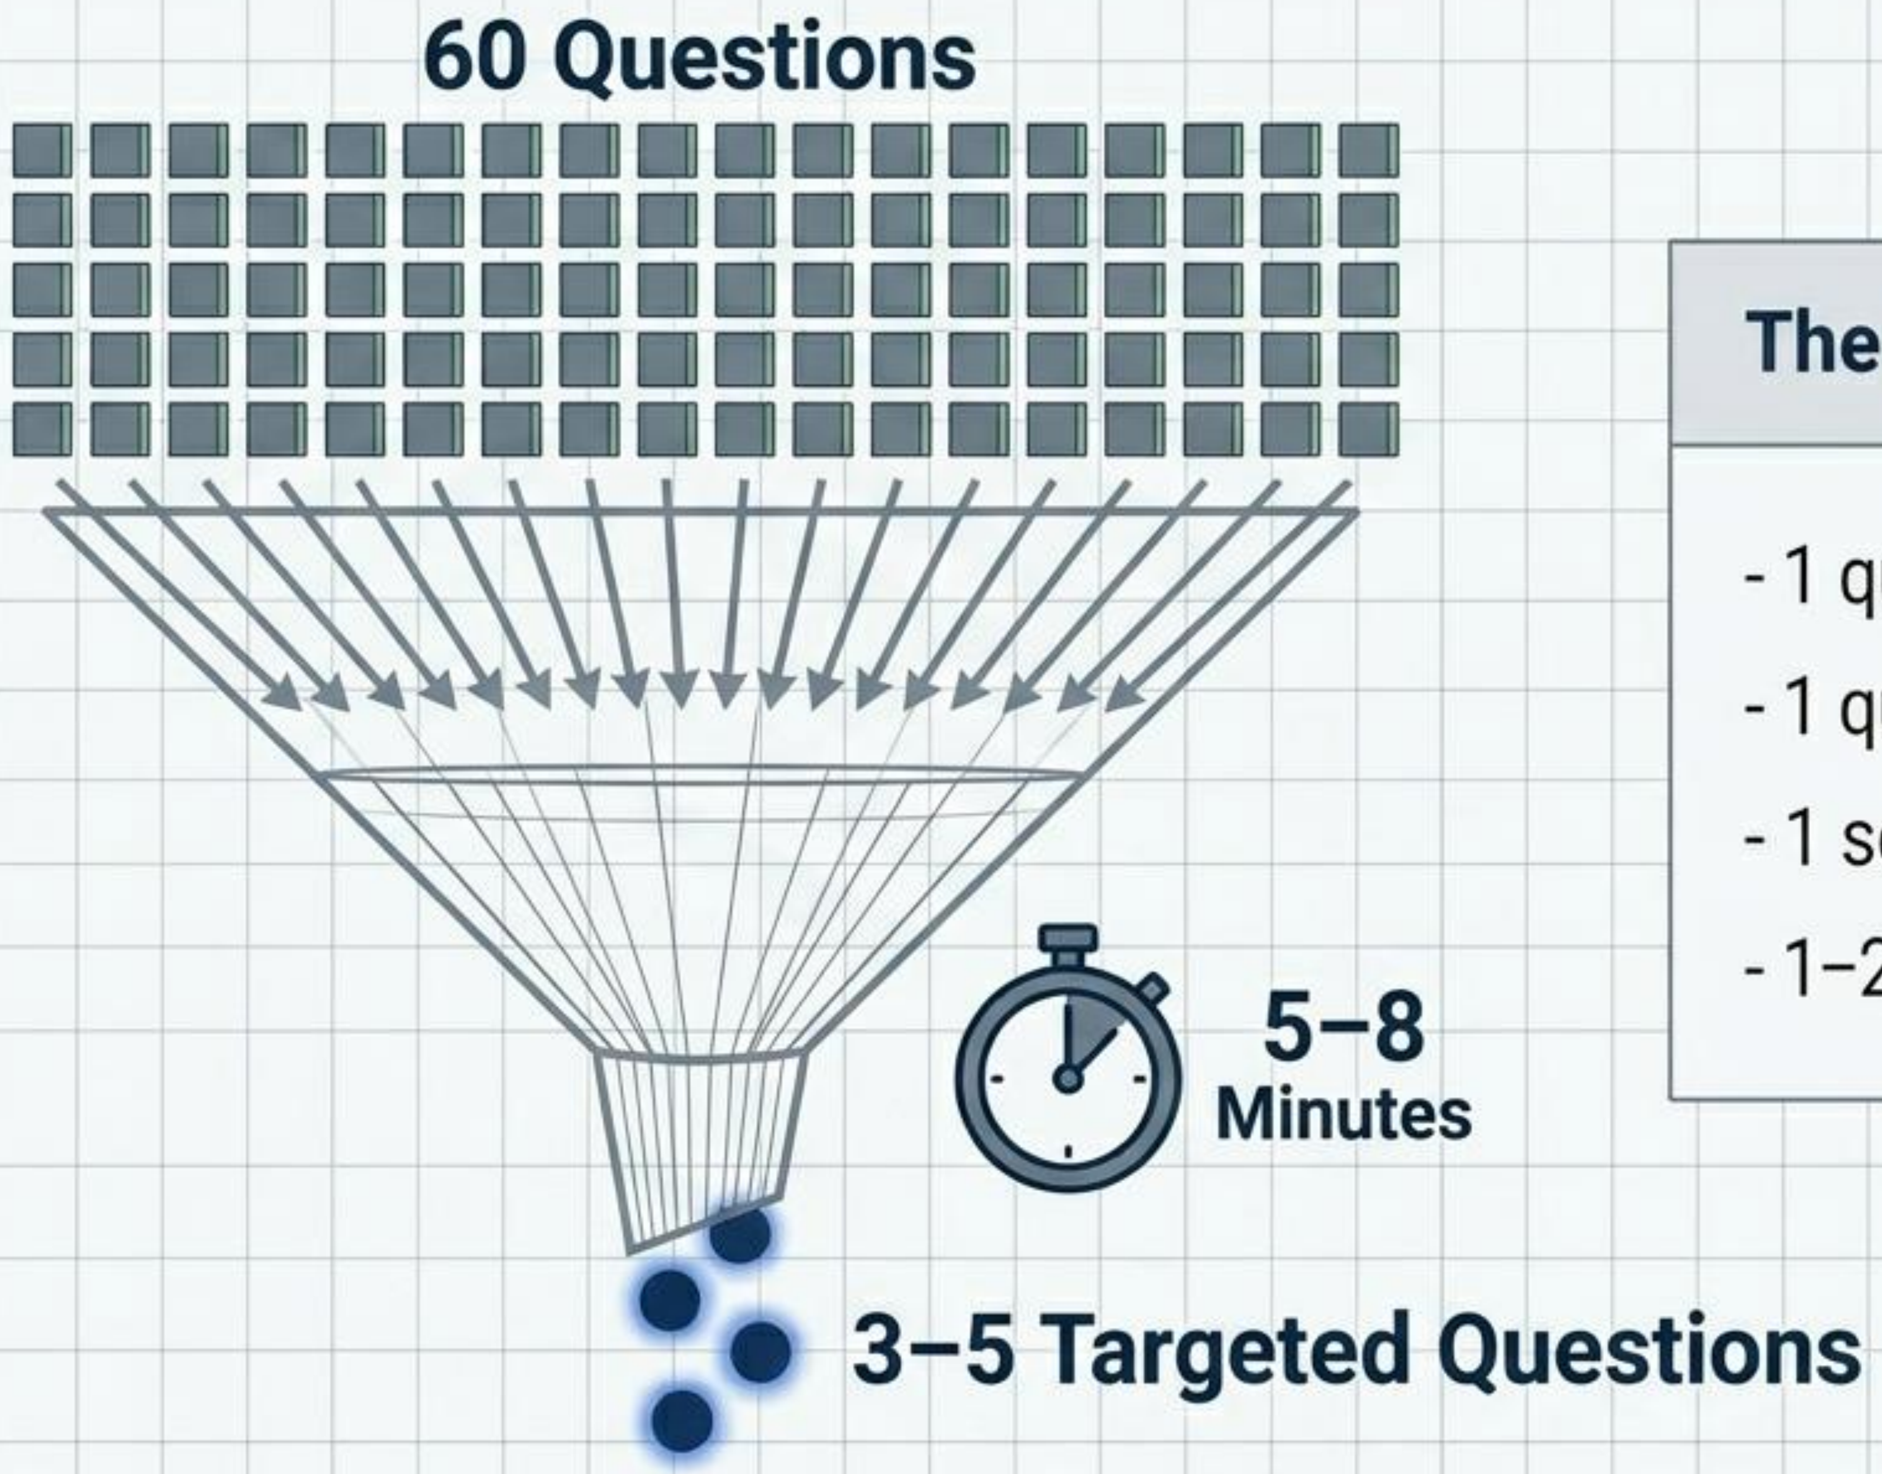
If students use AI during Practice, it does not damage assessment validity. They are either training honestly or wasting their own time.



Teaching self-monitoring. Readiness checks give teachers and students actionable data without pretending the score is secure evidence.



Images and settings add friction. They do not create security. Verification is the actual integrity layer.



The Filter Output Breakdown:

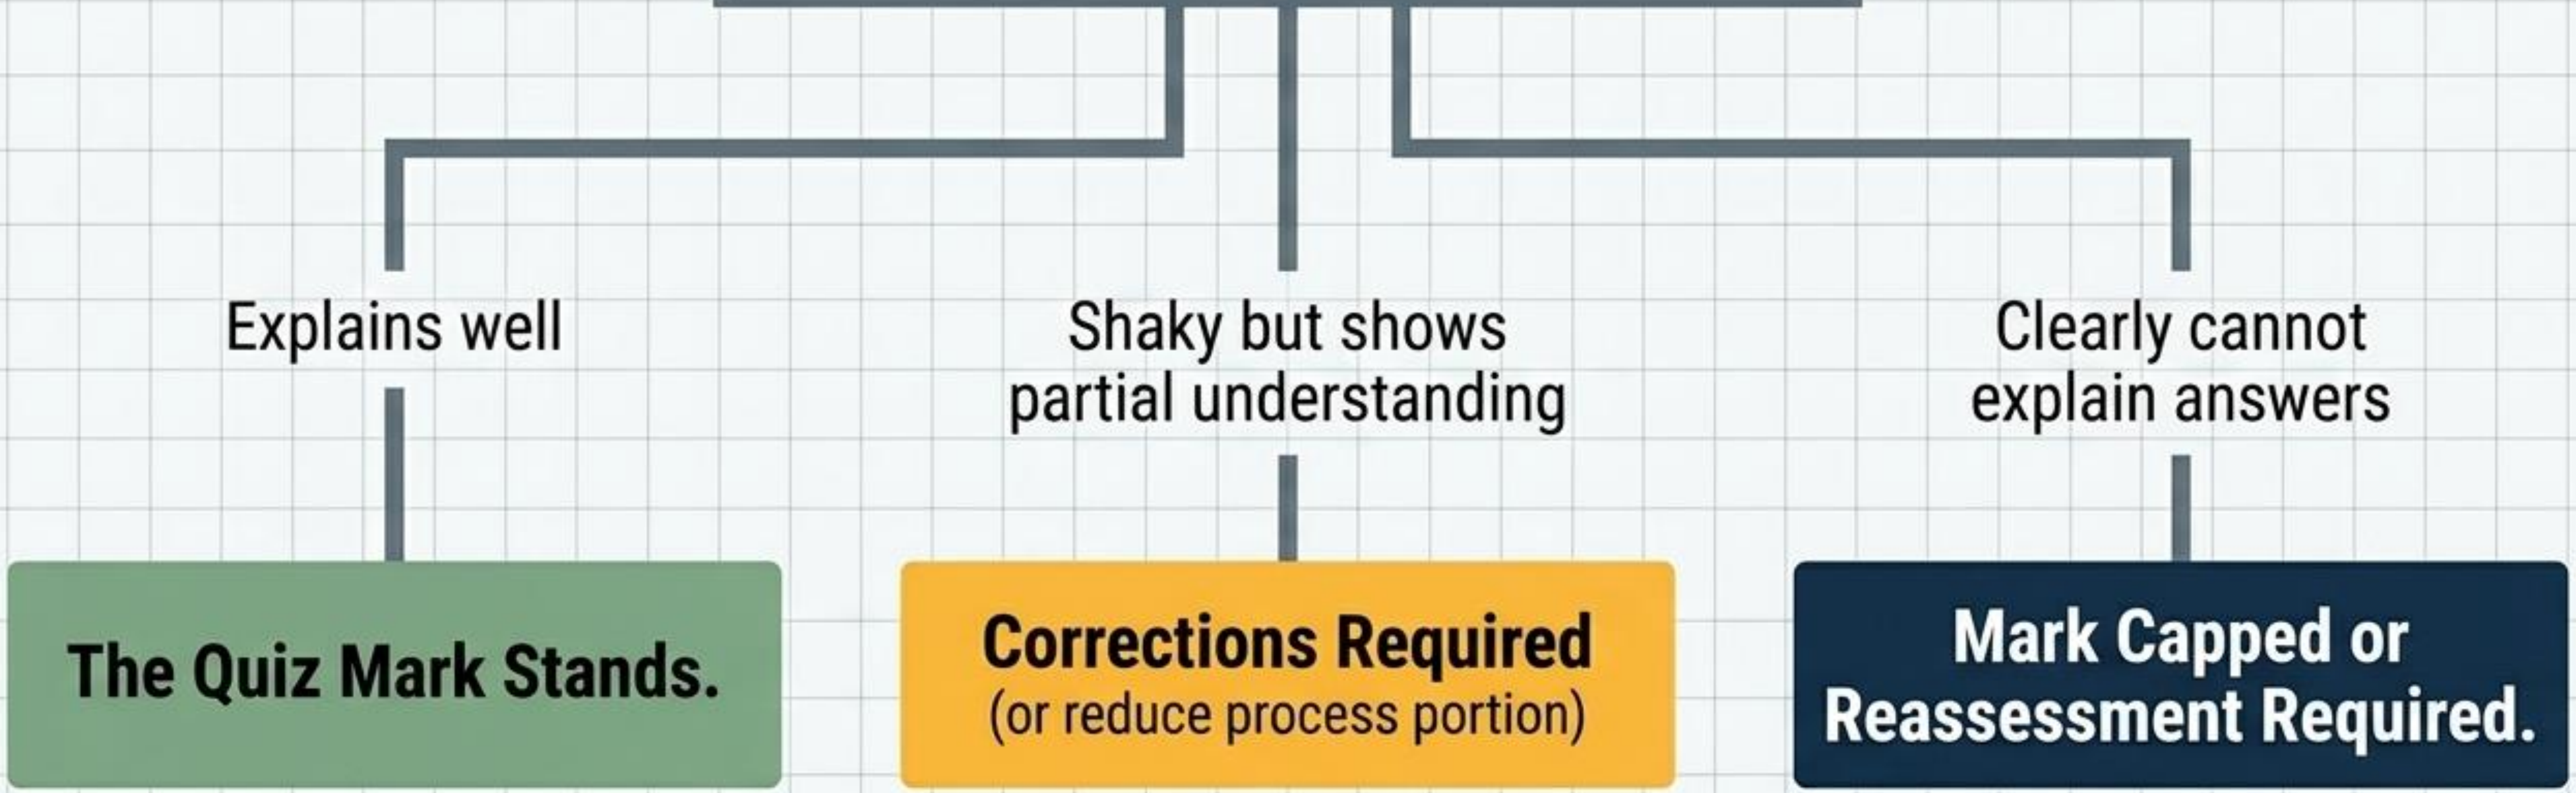
- 1 question the student got correct
- 1 question the student got wrong
- 1 source-based question
- 1–2 important concept questions

Verification is not a retake. It is a highly targeted 5-minute sampling to prove authorship and comprehension.

The Defence Protocol: Making Understanding Visible

Defence Probe	**COGNITIVE TARGET**
Why did you choose that answer?	**Checks:** Reasoning
Why is one specific distractor wrong?	**Checks:** Concept understanding
What clue in the source mattered?	**Checks:** Source interpretation
What specific concept was being tested?	**Checks:** Course connection
Apply that idea to a new example.	**Checks:** Transfer

Student Explanation of Selected Answers



The Absolute Rule: If the student cannot defend the result, the result is not fully validated.

Unified Institutional Messaging

School Policy

Practice and readiness checks are ungraded. Summative multiple-choice assessments count for marks only when paired with verification. Because online tests are completed at home, scores alone are not treated as complete proof of learning.

Student Expectation

You will get lots of practice to build diploma skills. Ungraded checks help you improve. When a test counts for marks, you must explain your answers. A high score without understanding will not hold up.

PRACTICE BUILDS SKILL.

READINESS CHECKS GUIDE PREPARATION.

VERIFIED M.C. PROVES UNDERSTANDING.

We are not trying to catch every possible cheat.
We are making understanding visible.
