Part One: Multiple-Choice Items

Read each item carefully and decide which choice best completes the statement or answers the question. Write the letter of your choice in the blank before the item.

_____ 1. In the _____ stage of development, language is at a rudimentary level.

A. 1st (prenatal)
B. 2nd (infancy)
C. 3rd (early childhood
D. 4th (late childhood)

_____ 2. Stage 7 (middle age), according to the course materials, has an age range between

A. 30-50
B. 35-55
C. 40-60
D. 45-65

Use the information below to answer multiple-choice item 3.

If a child is kept in a dark room for the first five years of life, he or she may never see even if he or she was born with properly functioning eyes and a healthy visual cortex (part of the brain).

_____ 3. The time span of five years is an example of _____ whereby the visual system must be _____ or else it will cease to function.

A. a teratogen; exposed
B. prehension; irradiated
C. a critical period; stimulated
D. stage 3 (early childhood); activated

_____ 4. With descriptive research, the researcher _____ influence the participants and _____ make an inference as to what might cause the observed behaviours.

A. does; does
B. does; does not
C. does not; does
D. does not; does not

_____ 5. What type of study design would be most appropriate to investigate if people's problem-solving abilities increase as they age?

A. Historical
B. Normative
C. Longitudinal
D. Cross-sectional

_____ 6. What type of study design would be most appropriate to determine if lying was a genetically inherited trait?

A. Twin
B. Historical
C. Correlational
D. Cross-sectional

_____ 8. What type of study design would be most appropriate to determine if the reported cases of birth defects have decreased over the last century?

A. Historical
B. Normative
C. Longitudinal
D. Cross-sectional

_____ 8. What type of study design would be most appropriate to determine if boys in three age categories have denser bones than girls in the same age categories?

A. Twin
B. Historical
C. Correlational
D. Cross-sectional

_____ 9. What type of study design would be most appropriate to determine when most children learn to walk?

A. Historical
B. Normative
C. Longitudinal
D. Cross-sectional

Use the information below to answer multiple-choice item 10.

A set of identical twins are separated at birth. As adults the twins are reunited and studied by researchers. The researchers learn that one twin is much more aggressive than the other.

_____ 10. Using their knowledge of identical twins, the researchers theorize that the difference in aggressiveness is due to

A. genetic differences
B. environmental factors
C. which twin was born first
D. how old the twins were when reunited

_____ 11. When a sperm cell fertilizes and egg cell, the resulting cluster of cells is called a(n) _____ for the first _____ weeks after fertilization.

A. zygote; two
B. zygote; eight
C. embryo; two
D. embryo; eight

_____ 12. The results of a(n) _____ is more _____ because the doctor must interpret and determine the relevance of certain facial expressions.

A. Prechtl Test; objective
B. Prechtl Test; subjective
C. Apgar Exam; objective
D. Apgar Exam; subjective

Use the information below to answer multiple-choice item 13.

A doctor uses the Apgar exam to assess a newborn. The infant is rated a zero on stimulus response, a one on muscle tone, and the best rating in the rest of the categories.

_____ 13. This infant would have an overall rating of

A. five
B. six
C. seven
D. eight

_____ 14. The Brazelton scale is a comprehensive and time consuming neonatal test because the test assesses a baby's _____ behaviours such as sucking and _____.

A. organized; crying
B. repetitive ; sleeping
C. controlled; breathing
D. coordinated; thermoregulation

Use the information below to answer multiple-choice items 15 and 16.

Robbie is two years-old when his parents purchase a one month old Pomeranian dog. This is the first dog Robbie is introduced to and when his parents call the Pomeranian "doggie," Robbie calls the next five small furry four-legged animals he sees, "doggie."

_____ 15. By calling the next five small furry four-legged animals he sees, "doggie," Robbie is experiencing

A. overextension
B. underextension
C. overgeneralization
D. undergeneralization

_____ 16. Robbie is then introduced to an adult St. Bernard dog. He does **not** call this dog "doggie" which means he is experiencing

A. overextension
B. underextension
C. overgeneralization
D. undergeneralization

_____ 17. While stereotypes may be positive or negative, they are all _____images or ideas regarding a particular type of person or thing.

A. neutral
B. unbiased
C. complicated
D. oversimplified

Part Two: Matching Teratogen to Effect

In the blank beside each statement, place the letter of the term (teratogen) that best describes the effect. Terms may not be used more than once and not all terms will be used. Please note the **category** of teratogen in the statement when responding.

Statements

_____ 1. Consumption of this therapeutic drug may increase the likelihood of heart defects.

_____ 2. Hearing loss is one potential effect of this therapeutic drug.

_____ 3. Exposure to this environmental hazard may cause anemia.

_____ 4. Discoloration of teeth is common with this therapeutic drug.

_____ 5. Exposure to this environmental hazard may result in poor motor coordination.

_____ 6. Respiratory problems may occur in newborns whose mothers have used this therapeutic drug.

_____ 7. Leukemia, genetic alterations, and cancer may result because of exposure to this environmental hazard.

_____ 8. Excessive and continued use of this substance by the mother may result in brain damage, growth retardation, and mental retardation.

_____ 9. This infection in the mother may cause eye damage, hearing loss, and heart defects in the newborn.

____ 10. Deformed limbs are a common effect of this therapeutic drug.

Terms

A. alcohol
B. barbiturates
C. gold
D. herpes
E. lead
F. mercury
G. nicotine (smoking)
H. phenytoin
I. PCB*
J. radiation
K. rubella
L. streptomycin
M. syphilis
N. tetracycline
O. thalidomide

* PCB
polychlorinated biphenyl

Value 10

Part Three: True or False

Read each item carefully and decide if the statement is true or false. Write **T** or **F** in the blanks to indicate your choices.

_____ 1. In a healthy newborn, the last sense to fully mature is taste.

_____ 2. At first, babies recognize their parents by their voices and smell, not by sight.

_____ 3. Correlations are relationships that exist between two factors/variables.

_____ 4. Normative studies judge a child as being either normal or abnormal with respect to an average child.

_____ 5. Cognitive language theorists believe that children learn the meaning of words through classification and categorization.

_____ 6. Social inferences are the sets of steps a child must follow when performing a given behaviour.

_____ 7. Prehension relates to a baby's grasping reflex.

_____ 8. Modelling is a way parents encourage a child's proper use of words.

_____ 9. Punishment is the main influence on a child's social development.

___ 10. Motor development proceeds in a toe-to-head fashion.

Value
13

Part Four: Written-Response Items

Respond to the following items on the blanks below the items.

4 1. How do longitudinal studies differ from cross-sectional studies?

2 2. What is the palmar reflex?

2 3. The course materials describe three methods of defining temperament. Select **one** of the methods and list the areas that are assessed.

3 4. The following are some stereotypes you may have heard before:

- Asian people are smart (e.g., good at math).
- Blondes are dumb.
- Teenagers are not trustworthy.
- Jewish people are frugal.
- Albertans (especially oil-field/rig-workers) are "red-necks."

Provide **two** additional examples of stereotypes that you have heard or might hold. Examples may include references to people in your geographical area, culture, or age group and/or they may include stereotypes of Americans, Canadians, Ukrainians, Caucasians, Francophones, etc.

2 5. Using one of your examples from question four, explain why the stereotype could not possibly apply to all the members of the group.

End of Assignment Booklet 2
After you have completed all items, submit your work to your marker.
