Part One: Multiple-Choice Items

Read each item carefully and decide which choice best completes the statement or answers the question. Write the letter of your choice in the blank before the item.

_____ 1. In the nature-nurture debate, **nature** refers to

A. being exposed to the natural environment
B. having parents that are good natured and kind
C. the influence of genetics or heredity on human development
D. the influence of the pre- and post-birth environment on human development

_____ 2. Chromosomes in non-reproductive cells can be arranged into _____ pairs, _____ of which are identical.

A. 23; 22
B. 23; 23
C. 46; 44
D. 46; 46

_____ 3. Mothers donate a(n) _____ chromosome to their children, while fathers donate a(n) _____ chromosome.

A. x or y; x
B. x or y; y
C. x; x or y
D. y; x or y

_____ 4. Whereas _____ is the set of genes responsible for a particular trait, _____ is the physical expression of that trait.

A. DNA; RNA
B. RNA; DNA
C. genotype; phenotype
D. phenotype; genotype

NOTE: Multiple-choice items 5-14 regard cystic fibrosis (CF). CF is a genetic disease caused by a faulty gene. A major symptom of CF is loss of lung function. A child must receive two faulty genes (one from each parent) for the disease to present itself.

Use the following key to assist you in answering multiple-choice items 5-14.

Key			
Unaffected male	Carrier male	Affected (CF) male	
Unaffected female	Carrier female	Affected (CF) female	

Unaffected individuals have **no** faulty genes.

A *carrier* has **one** faulty gene.

An *affected* individual has **two** faulty genes.

_____ 5. An affected male and an unaffected female want to start a family. All offspring will be

A. unaffected
B. carriers of CF
C. affected with CF

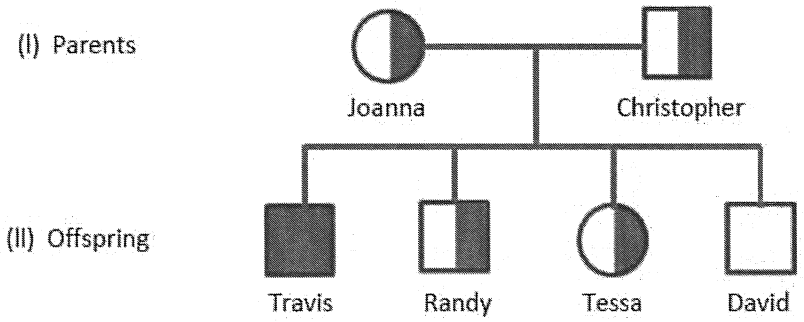
_____ 6. An affected male and an unaffected female want to start a family. The genotype of any children will be

A. faulty gene, faulty gene
B. faulty gene, normal gene
C. normal gene, normal gene

_____ 7. An affected male and an unaffected female want to start a family. The phenotype displayed by all offspring would be _____ lung functioning.

A. normal
B. abnormal

Use the following pedigree chart to answer multiple-choice items 8-14.



_____ 8. Parents Joanna and Christopher are both

A. carriers of CF
B. immune to CF
C. affected by CF
D. unaffected by CF

_____ 9. Which of Joanna and Christopher's children is unaffected by CF?

A. Travis
B. Randy
C. Tessa
D. David

_____ 10. Which of Joanna and Christopher's children is affected by CF?

A. Travis
B. Randy
C. Tessa
D. David

_____ 11. How many of Joanna and Christopher's children are carriers of CF?

A. 0
B. 1
C. 2
D. 3

_____ 12. Which of Joanna and Christopher's children is ***guaranteed*** not to have affected children him/herself?

A. Travis
B. Randy
C. Tessa
D. David

_____ 13. The genotype of Randy is

A. faulty gene, faulty gene
B. faulty gene, normal gene
C. normal gene, normal gene

_____ 14. Travis and Randy's phenotypes, in order, are _____ and _____ lung functioning.

A. normal; normal
B. normal; abnormal
C. abnormal; normal
D. abnormal; abnormal

_____ 15. In the nature-nurture debate, **nurture** refers to a person's environment

A. after birth only
B. before birth only
C. with his/her family only
D. both before and after birth

_____ 16. To develop in a healthy manner, children need adequate _____ and _____.

A. family; work
B. culture; potential
C. nutrition; stimulation
D. vaccinations; imagination

_____ 17. The rubber-band theory refers to a person's _____ and _____.

A. musical talent; height
B. physical appearance; intelligence
C. ability to stretch rubber; aim accurately at a target
D. ability to find adequate nutrition; resistance to infection

_____ 18. The rubber-band theory states that

A. smaller rubber-bands can stretch more than large rubber bands
B. children with fetal alcohol spectrum disorder do not have rubber bands
C. everyone has the same size of rubber-band, but not everyone stretches it
D. people can stretch their rubber-bands if provided an enriched environment

_____ 19. Baby Albert was conditioned to fear an object of which he was originally unafraid. The fear was conditioned by pairing a(n) _____ with a _____.

A. bell; bowl of food
B. loud sound; white rat
C. electric shock; furry blanket
D. Santa Clause beard; metal bar

_____ 20. The XYY genetic abnormality

A. is the cause of criminal behaviour
B. has no correlation to criminal behaviour
C. is correlated to increased testosterone in males
D. is correlated with a man's potential to grow tall

_____ 21. Tabula rasa means

A. blank slate
B. raised table
C. empty container
D. calculated rations

Value 10

Part Two: Matching

Choose the letter of the term that best describes the concept or completes the sentence. Terms may not be used more than once and not all terms will be used.

Statements

_____ 1. These are long threadlike structures of nucleic acids that are contained in the nuclei of cells.

_____ 2. The _____ determines the gender of a child.

_____ 3. A person with _____ has an extra 21st chromosome.

_____ 4. This psychologist believed that all development is predetermined by genetics.

_____ 5. This man believed that humans are born completely good and that society inspires evil in them after birth.

_____ 6. In human cells, this controls every activity of the cell in which it exists.

_____ 7. If *gene **B*** has more influence over a physical trait or characteristic compared to its partner gene, *gene **b***, the first gene (*gene **B***) is considered ___.

_____ 8. This person believed that all development of an individual is entirely determined by experiences and training after birth.

_____ 9. This man demonstrated that fears could be learned.

____ 10. This type of study has shown that there is both a genetic and an environmental influence in the development of alcoholism.

Terms

A. Chromosomes
B. Correlational
C. DNA
D. Dominant
E. Down syndrome
F. Edward's syndrome
G. Father
H. Genes
I. Gesell
J. Locke
K. Longitudinal
L. Mother
M. Recessive
N. RNA
O. Rousseau
P. Twin
Q. Watson

Value
10

Part Three: True or False

Read each item carefully and decide if the statement is true or false. Write **T** or **F** in the blanks to indicate your choices.

_____ 1. Chromosomes are composed of genes.

_____ 2. Prenatal refers to the first year of life after birth.

_____ 3. A recessive gene can mask the effects of a dominant gene.

_____ 4. Except for the reproductive cells, all cells in an individual share identical chromosomes.

_____ 5. Maturation is the process of mental growth and development of an organism over time.

_____ 6. Your cousin, father's mother, and your sister's husband are all genetically related to you.

_____ 7. To be genetically related, two individuals must have some chromosomes in common.

_____ 8. Male offspring get more genetic material from their fathers than their mothers.

_____ 9. Interactionists believe that both genetics and the environment interact in the development of people, both after birth and in the womb.

____ 10. A child cannot learn how to walk until their leg muscles have matured enough to support his/her body mass.

Value
23

Part Four: Written-Response Items

Respond to the following items on the blanks below the items.

2 1. Describe the nature-nurture debate.

2 2. Regarding the nature-nurture debate, which factor (nature or nurture) do you believe is more important? Provide a rational for your response.

3 3. If you suspected you were the carrier of a genetic abnormality or disorder such as cystic fibrosis (or similar), would you have children? Explain.

2 4. Describe one area where you believe Watson acted unethically with his Baby Albert experiments.

_____

_____

_____

_____

_____

14 5. Select **one** of the following two options and complete the associated tasks. Remember to enumerate (number) your responses on the response page so your marker knows the item to which you are responding

_____

Option A: Deprived Childhood Environments
In the course content you read about the Victor, the "Wild Boy of Aveyron." Conduct research (Internet or otherwise) regarding Anna and Isabel, two other deprived children. You can search these children buy entering their names and the term "feral" or "isolated' into a search engine. After reviewing the research, provide responses to the following items:

1. Provide at least two URLs (web addresses) of the internet sources you referenced OR a bibliography of any other sources used for this option. (2 marks)

2. In the response area, answer the five questions below for **each** child. (5 marks for each child = 10 marks)

   a. How long was Anna/Isabel isolated?
   b. What was the reason for isolating Anna/Isabel?
   c. What kind of human contact did Anna/Isabel receive while isolated?
   d. What kind of problems did Anna/Isabel have when released?
   e. What was the level of functioning Anna/Isabel has after rehabilitation?

3. In your opinion, how important was the childhood environments of Anna and Isabel regarding their physical and mental development? Explain. (2 marks)

---------- **or** ----------

Option B: Eugenics

Many countries/cultures have attempted to improve the genetic quality of their people, Alberta included. Conduct research (Internet or otherwise) regarding eugenics and sterilization. If you enter the phrase "Alberta sterilization history" into a search engine, you should receive many legitimate links. After reviewing the research, provide responses to the following tasks:

1. Define eugenics. (2 marks)

2. Provide at least two URLs (web addresses) of the internet sources you referenced for Alberta's sterilization history OR a bibliography of any other sources used for this option. (2 marks)

3. In the response area, answer the 7 items below. (8 marks)

   a. When did Alberta establish the Eugenics Board and introduce its Sexual Sterilization Act (SS Act)? (1)
   b. What was the SS Act? (1)
   c. When was the SS Act repealed? (1)
   d. What other province had sterilization legislation? (1)
   e. List at least two groups targeted by the SS Act. (1)
   f. Who is Leilani Muir and how does her story link to the SS Act? (2)
   g. How much was Muir awarded from her lawsuit? (1)

4. Do you think restrictions should be placed on who should be allowed to reproduce? Provide at least one point of rationale in your response. (2 marks)

My Option Selection is: _____

(Room for your responses follow on pages 17 and 18.)

End of Assignment Booklet 5
After you have completed all items, submit your work to your marker.
