

Rubric – Lab Report
Categories and Descriptors Reprinted (with Authorization) from Corwin Press Inc.

Level	Title/ Introduction	Background Research	Question/Problem/ Hypothesis	Procedures	Data & Results	Conclusions	Language Used
Not yet met learning objectives	The title is stated in a rambling, non-concise fashion. There is an attempt within the title to state both the manipulated and responding variables and the results of the experiment. The title of the report is written in a declarative statement. The lead-in information lacks conciseness and clarity.	Literature and prior observations are cited but provide little insight into the phenomena to be included in the report.	The question or problem that the lab was designed to answer is ill defined. The hypothesis is stated, but not in the “If-and-then” format.	Some of the steps are understandable; most are confusing and lack detail.	Data tables and graphs are completed but lack accuracy. Patterns or trends within the data are difficult to discern. Data analysis lacks thoroughness.	Presents an illogical explanation for findings.	For the most part, language is used correctly. However, many words are misspelled, impacting upon the final product. The report borders on being sloppy, illegible, and not presentable.
