

Rubric – Lab Report
Categories and Descriptors Reprinted (with Authorization) from Corwin Press Inc.

Level	Title/ Introduction	Background Research	Question/Problem/ Hypothesis	Procedures	Data & Results	Conclusions	Language Used
Meets learning objectives	The title states both the manipulated and responding variables and the results of the experiment. The title of the report is written in a clear declarative statement. The lead-in information is concise and develops a clear understanding of the report to follow. An abstract of the lab is provided.	Relevant literature and prior observations are cited which provide insight into the phenomena to be included in the report.	The question or problem that the lab was designed to answer is listed. The hypothesis is eloquently stated in the “If-and-then” format. It predicts the influence of the manipulated variable on the responding variable.	The procedures for controlling and measuring the responding variable are defined and clear. A detailed, logical step-by-step set of procedures that was used for conducting the lab is listed. Safety concerns are missing from the procedures.	Data tables and graphs are neatly completed and totally accurate. Patterns or trends in data are noted. Data analysis is thorough.	A response to the question/hypothesis is provided. Some limitations and extrapolations of the data are cited.	Language is used correctly and purposefully. Some words are misspelled, but with little or no effect upon the final product. The report is neat, legible, and presentable.
