

Rubric – Lab Report
Categories and Descriptors Reprinted (with Authorization) from Corwin Press Inc.

Level	Title/ Introduction	Background Research	Question/Problem/ Hypothesis	Procedures	Data & Results	Conclusions	Language Used
Exceeds learning objectives	The title states clearly both the manipulated and responding variables and the results of the experiment. The title of the report is written in a clear declarative statement. The lead-in information is concise and develops a clear understanding of the report to follow. A concise abstract of the lab is provided and does not exceed 250 words.	Relevant literature and prior observations are cited which provide much insight into the phenomena to be included in the report.	The question or problem that the lab was designed to answer is well articulated. The hypothesis is eloquently stated in the “If-and-then” format. It predicts the influence of the manipulated variable on the responding variable.	The procedures for controlling and measuring the responding variable are well defined and clear. A detailed, logical step-by-step set of procedures that was used for conducting the lab is listed. Safety concerns are listed among the procedures.	Data tables and graphs are expertly and neatly completed and totally accurate. Patterns or trends in data are noted. Data analysis is thorough.	A response to the question/hypothesis is clearly and completely provided and is consistent with the data. Limitations and extrapolations of the data are cited. Questions for further study are developed. Unresolved questions and problems are listed.	Language is used correctly and purposefully. All words are spelled correctly. The report is neat, legible, and presentable.
