| <b>Remedial<br/>work<br/>required</b> | The title is stated in a rambling, non-concise fashion. There is no attempt within the title to state both the manipulated and responding variables and the results of the experiment. The title of the report is written in a declarative statement. The lead-in information provides little or no information that leads into the report. | Literature and prior observations are not cited. | The question or problem that the lab was designed to answer is not defined. There is no hypothesis. | Steps are not sequential; most steps are missing or are confusing. | Data tables and/or graphs are missing information and are inaccurate. Consequently, patterns or trends within the data are not discernable. Little attempt is made at data analysis. | Presents an illogical explanation for findings and does not address the question that guided the lab.. | Language is used incorrectly and without purpose. Many words are misspelled, impacting upon the final product. The report is definitely sloppy, illegible, and not presentable. |
