

All My Work

Your saved learning record for The Reproductive System.

7 completed activity runs. Required checks and formative practice are recorded separately.

Unfinished work: 0 required check(s), 0 practice run(s). Resume them from their original sections; they are not counted as completed.

Writing and flash-card self-assessments are not automatically graded. Completion is not a mastery certificate.

Female reproductive anatomy

9/17/2026, 8:41:15 PM · Elapsed 0m 0s · Formative practice

Review submitted responses and attempts

Label A

Attempt 1: Ovary — Correct

Reference: Ovary

Label B

Attempt 1: Oviduct — Correct

Reference: Oviduct

Label C

Attempt 1: Uterus — Correct

Reference: Uterus

Label D

Attempt 1: Fimbriae — Correct

Reference: Fimbriae

Label E

Attempt 1: Cervix — Correct

Reference: Cervix

Label F

Attempt 1: Vagina — Correct

Reference: Vagina

Identify the hormone patterns

Review submitted responses and attempts

Label A

Attempt 1: Hypothalamus — Correct

Reference: Hypothalamus

Label B

Attempt 1: GnRH — Correct

Reference: GnRH

Label C

Attempt 1: Anterior pituitary — Correct

Reference: Anterior pituitary

Label D

Attempt 1: FSH — Correct

Reference: FSH

Label E

Attempt 1: LH — Correct

Reference: LH

Label F

Attempt 1: Sertoli cells — Correct

Reference: Sertoli cells

Label G

Attempt 1: Interstitial cells — Correct

Reference: Interstitial cells

Label H

Attempt 1: Testosterone — Correct

Reference: Testosterone

Label I

Attempt 1: Support of sperm production — Correct

Reference: Support of sperm production

Follicle development

9/17/2026, 8:41:14 PM · Elapsed 0m 0s · Formative practice

Review submitted responses and attempts

Label A

Attempt 1: Developing follicles — Correct

Reference: Developing follicles

Label B

Attempt 1: Mature follicle — Correct

Reference: Mature follicle

Label C

Attempt 1: Oocyte — Correct

Reference: Oocyte

Label D

Attempt 1: Released oocyte — Correct

Reference: Released oocyte

Label E

Attempt 1: Corpus luteum — Correct

Reference: Corpus luteum

Sperm structure

9/17/2026, 8:41:14 PM · Elapsed 0m 0s · Formative practice

Review submitted responses and attempts

Label A

Attempt 1: Acrosome — Correct

Reference: Acrosome

Label B

Attempt 1: Head — Correct

Reference: Head

Label C

Attempt 1: Middle piece — Correct

Reference: Middle piece

Label D

Attempt 1: Flagellum — Correct

Reference: Flagellum

Male reproductive anatomy

9/17/2026, 8:41:13 PM · Elapsed 0m 0s · Formative practice

Review submitted responses and attempts

Label A

Attempt 1: Vas deferens — Correct

Reference: Vas deferens

Label B

Attempt 1: Urethra — Correct

Reference: Urethra

Label C

Attempt 1: Penis — Correct

Reference: Penis

Label D

Attempt 1: Seminal vesicle — Correct

Reference: Seminal vesicle

Label E

Attempt 1: Ejaculatory duct — Correct

Reference: Ejaculatory duct

Label F

Attempt 1: Prostate gland — Correct

Reference: Prostate gland

Label G

Attempt 1: Bulbourethral gland — Correct

Reference: Bulbourethral gland

Label H

Attempt 1: Epididymis — Correct

Reference: Epididymis

Label I

Attempt 1: Testis — Correct

Reference: Testis

Label J

Attempt 1: Scrotum — Correct

Reference: Scrotum

Reproductive systems and sex characteristics

9/17/2026, 8:41:11 PM · Elapsed 0m 0s · Required check

Review submitted responses and attempts

First-try multiple choice: 1/2. Writing is not automatically graded.

Which pairing identifies an organ and the gamete associated with it?

Options: Testis — sperm · Ovary — estrogen · Sperm — testis · Testosterone — sperm

Attempt 1: Ovary — estrogen — Incorrect

Attempt 2: Testis — sperm — Correct

A voice becomes deeper during puberty. Which classification fits this change?

Options: A change from 23 to 46 chromosomes · Secondary sex characteristic · Primary sex characteristic · Formation of a gamete

Attempt 1: Secondary sex characteristic — Correct

Explain how a gonad, a gamete and a reproductive hormone differ. Connect all three using either the ovary or testis.

Real-origin saved Chapter 14 work. A gonad is an organ. A gamete is a reproductive cell. A hormone is a chemical signal. For example, a testis contains sites of sperm production and cells that release testosterone.

Submitted writing; human review required.

Why is the statement “a feature that changes at puberty must be a secondary sex characteristic” incorrect? Use two examples.

Reproductive organs also develop further at puberty. A testis is a primary characteristic even when sperm production begins; a deepening voice is a secondary characteristic. Classification depends on the kind of structure or feature, not only its timing.

Submitted writing; human review required.

Framer work

No Framer words selected.

Collected optional responses

No optional written responses collected.

Textbook question work

Draft and saved question responses. Optional and ungraded.
