

All My Work

Your saved learning record for Population Growth and Interactions.

1 completed activity run. Required checks and formative practice are recorded separately.

Unfinished work: 0 required check(s), 1 practice run(s). Resume them from their original sections; they are not counted as completed.

Writing and flash-card self-assessments are not automatically graded. Completion is not a mastery certificate.

Mixed practice

9/17/2026, 8:44:29 PM • Elapsed 0m 1s • Formative practice

Review submitted responses and attempts

First-try result: 6/6. Later corrections are recorded separately.

Which term matches this description? A factor whose effect is not primarily determined by the population's density in the stated case.

Options shown: environmental resistance • density-independent factor • density-dependent factor • overshoot

Attempt 1: density-independent factor — Correct.

Reference: density-independent factor

What does letter A identify?

Options shown: Primary succession • Secondary succession

Attempt 1: Primary succession — Correct.

Reference: Primary succession

Select the TWO accurate statements about exponential and logistic growth.

Options shown: K can change when environmental conditions change. · It cannot continue indefinitely in a finite environment. · The highest point on a population graph always has the greatest growth rate. · A logistic population must have no births once it approaches K.

Attempt 1: true-2 → true-1 — Correct.

Reference: K can change when environmental conditions change. · It cannot continue indefinitely in a finite environment.

Explain resource partitioning.

Self-report: Study again.

Reference: Differences in resource use that reduce overlap among competitors.

Identify the term illustrated: An epiphyte gains support while the host tree is not detectably helped or harmed.

Attempt 1: commensalism — Correct.

Reference: commensalism

Correct this incorrect statement: Every fire automatically removes all soil and begins primary succession.

Self-report: Study again.

Reference: Community change after disturbance where soil and some biological legacy remain. The amount of surviving soil and organisms matters more than the disturbance name alone.

A study measures lower water use but does not measure habitat or energy effects. Which conclusion is supported?

Self-report: Study again.

Reference: Water use fell in the measured setting; other effects remain untested. The conclusion must match the measured outcome.

Name the term described: Individuals spaced relatively evenly across a defined area.

Attempt 1: uniform distribution — Correct.

Reference: uniform distribution

Which term fits this definition? A model in which population growth slows as resource limits become important near carrying capacity.

Self-report: Study again.

Reference: logistic growth

A species grows better after another species is removed. What is a cautious interpretation?

Options shown: The result proves no other factor matters · The removed species was necessarily a predator · Competition is a supported hypothesis if other changes are controlled · Both species must be genetically identical

Attempt 1: Competition is a supported hypothesis if other changes are controlled — Correct.

Reference: Competition is a supported hypothesis if other changes are controlled

Frayer work

population density — Draft

Meaning: An edited explanation.

Key features: A specific learner explanation 2.

Example: A specific learner explanation 3.

Non-example / common confusion: A specific learner explanation 4.

clumped distribution — Draft

Meaning: (not yet written)

Key features: (not yet written)

Example: (not yet written)

Non-example / common confusion: (not yet written)

uniform distribution — Draft

Meaning: (not yet written)

Key features: (not yet written)

Example: (not yet written)

Non-example / common confusion: (not yet written)

Collected optional responses

Conservation choices for hippos and people

The comparison alone cannot isolate the proposed chemical effect. Hormone production and receptor response are distinct steps.

Textbook question work

Draft and saved question responses. Optional and ungraded.

No textbook question work yet.

Supported and independent practice
