

All My Work

Your saved learning record for Human Development.

1 completed activity run. Required checks and formative practice are recorded separately.

Unfinished work: 0 required check(s), 1 practice run(s). Resume them from their original sections; they are not counted as completed.

Writing and flash-card self-assessments are not automatically graded. Completion is not a mastery certificate.

Mixed practice

9/18/2026, 12:20:09 AM · Elapsed 0m 1s · Formative practice

Review submitted responses and attempts

First-try result: 6/6. Later corrections are recorded separately.

Explain diploid.

Self-report: Study again.

Reference: Having two sets of chromosomes, represented by $2n$.

Name the term described: Attachment and embedding of the blastocyst in the uterine endometrium.

Attempt 1: implantation — Correct.

Reference: implantation

Which placental function moves fetal carbon dioxide toward maternal circulation?

Options shown: Gas exchange across the placental interface · Open mixing of all fetal and maternal blood · Formation of the entire fetal nervous system · Digestion of food inside the fetal gut

Attempt 1: Gas exchange across the placental interface — Correct.

Reference: Gas exchange across the placental interface

What does letter C identify?

Options shown: Ectoderm · Endoderm · Mesoderm

Attempt 1: Endoderm — Correct.

Reference: Endoderm

Put these steps in order: Lactation and hormonal control after birth

Options shown: Milk moves toward the nipple · Contractile cells around mammary secretory structures contract · Sensory information reaches the hypothalamus · Oxytocin is released from the posterior pituitary · Suckling stimulates sensory receptors

Attempt 1: Suckling stimulates sensory receptors → Sensory information reaches the hypothalamus → Oxytocin is released from the posterior pituitary → Contractile cells around mammary secretory structures contract → Milk moves toward the nipple — Correct.

Reference: Suckling stimulates sensory receptors → Sensory information reaches the hypothalamus → Oxytocin is released from the posterior pituitary → Contractile cells around mammary secretory structures contract → Milk moves toward the nipple

Select the TWO accurate statements about fertilization and the zygote.

Options shown: Fertilization precedes implantation; these are different events in different locations. · A zygote contains only the sperm chromosome set. · A diploid cell must contain replicated X-shaped chromosomes. · One set still contains many different chromosomes.

Attempt 1: true-1 → true-2 — Correct.

Reference: Fertilization precedes implantation; these are different events in different locations. · One set still contains many different chromosomes.

Which term fits this definition? A procedure that interrupts sperm transport through the vasa deferentia.

Self-report: Study again.

Reference: vasectomy

Correct this incorrect statement: The trophoblast becomes only the embryo's brain.

Self-report: Study again.

Reference: The outer cell layer of the blastocyst that contributes to implantation and fetal support tissues. The trophoblast is not the inner cell mass.

Two models contain the same hCG concentration, but one has non-functional hCG receptors on luteal cells. What differs most directly?

Self-report: Study again.

Reference: The corpus luteum's response to the signal. Signal concentration and receptor response are separate requirements.

Identify the term illustrated: A thin membrane surrounds the space in which the fetus moves.

Attempt 1: amnion — Correct.

Reference: amnion

Frayer work

fertilization — Draft

Meaning: An edited explanation.

Key features: A specific learner explanation 2.

Example: A specific learner explanation 3.

Non-example / common confusion: A specific learner explanation 4.

zygote — Draft

Collected optional responses

Stem cells and development

The comparison alone cannot isolate the proposed chemical effect. Hormone production and receptor response are distinct steps.

Textbook question work

Draft and saved question responses. Optional and ungraded.

No textbook question work yet.

Supported and independent practice
