

All My Work

Your saved learning record for Population Growth and Interactions.

1 completed activity run. Required checks and formative practice are recorded separately.

Unfinished work: 0 required check(s), 1 practice run(s). Resume them from their original sections; they are not counted as completed.

Writing and flash-card self-assessments are not automatically graded. Completion is not a mastery certificate.

Mixed practice

9/18/2026, 12:21:48 AM • Elapsed 0m 1s • Formative practice

Review submitted responses and attempts

First-try result: 6/6. Later corrections are recorded separately.

Explain random distribution.

Self-report: Study again.

Reference: A spatial pattern without a strong regular or clustered arrangement at the scale considered.

A hypothetical survey counts 224 birds across 50,000 km². What is the average density?

Options shown: 2.24×10^{-5} birds/km² • 223.2 birds/km² • 4.48×10^{-3} birds/km² • 224 birds/km²

Attempt 1: 4.48×10^{-3} birds/km² — Correct.

Reference: 4.48×10^{-3} birds/km²

What does letter C identify?

Options shown: Logistic model · Carrying capacity K · Exponential model

Attempt 1: Exponential model — Correct.

Reference: Exponential model

Name the term described: A teaching description of traits often associated with rapid reproduction and many offspring.

Attempt 1: r-associated strategy — Correct.

Reference: r-associated strategy

Select the TWO accurate statements about feeding relationships and predator–prey changes.

Options shown: A delayed response means the populations cannot interact. · Producers transform energy; they do not create it. · Consumers obtain no energy from food. · Predation can affect both populations but is not their only influence.

Attempt 1: true-1 → true-2 — Correct.

Reference: Producers transform energy; they do not create it. · Predation can affect both populations but is not their only influence.

A species grows better after another species is removed. What is a cautious interpretation?

Options shown: The result proves no other factor matters · Competition is a supported hypothesis if other changes are controlled · Both species must be genetically identical · The removed species was necessarily a predator

Attempt 1: Competition is a supported hypothesis if other changes are controlled — Correct.

Reference: Competition is a supported hypothesis if other changes are controlled

Correct this incorrect statement: Overshoot guarantees a population will never recover.

Self-report: Study again.

Reference: Population size temporarily exceeding the level current resources can support sustainably. The consequences depend on resource depletion and response delays.

Identify the term illustrated: A predator's food supply includes individuals from a prey population.

Attempt 1: predation — Correct.

Reference: predation

Which term fits this definition? An interaction in which both partners benefit in the stated conditions.

Self-report: Study again.

Reference: mutualism

A researcher calls every abiotic factor density-independent without examining its effects. What is the weakness?

Self-report: Study again.

Reference: Classification should consider how the effect depends on density in the case. Living versus nonliving is not a sufficient definition of density dependence.

Frayer work

population density — Draft

Meaning: An edited explanation.

Key features: A specific learner explanation 2.

Example: A specific learner explanation 3.

Non-example / common confusion: A specific learner explanation 4.

clumped distribution — Draft

Collected optional responses

Conservation choices for hippos and people

The comparison alone cannot isolate the proposed chemical effect. Hormone production and receptor response are distinct steps.

Textbook question work

Draft and saved question responses. Optional and ungraded.

No textbook question work yet.

Supported and independent practice
