

Goal 7: Ensuring Environmental Sustainability

Halve, by 2015, the proportion of people without sustainable access to safe drinking water and basic sanitation

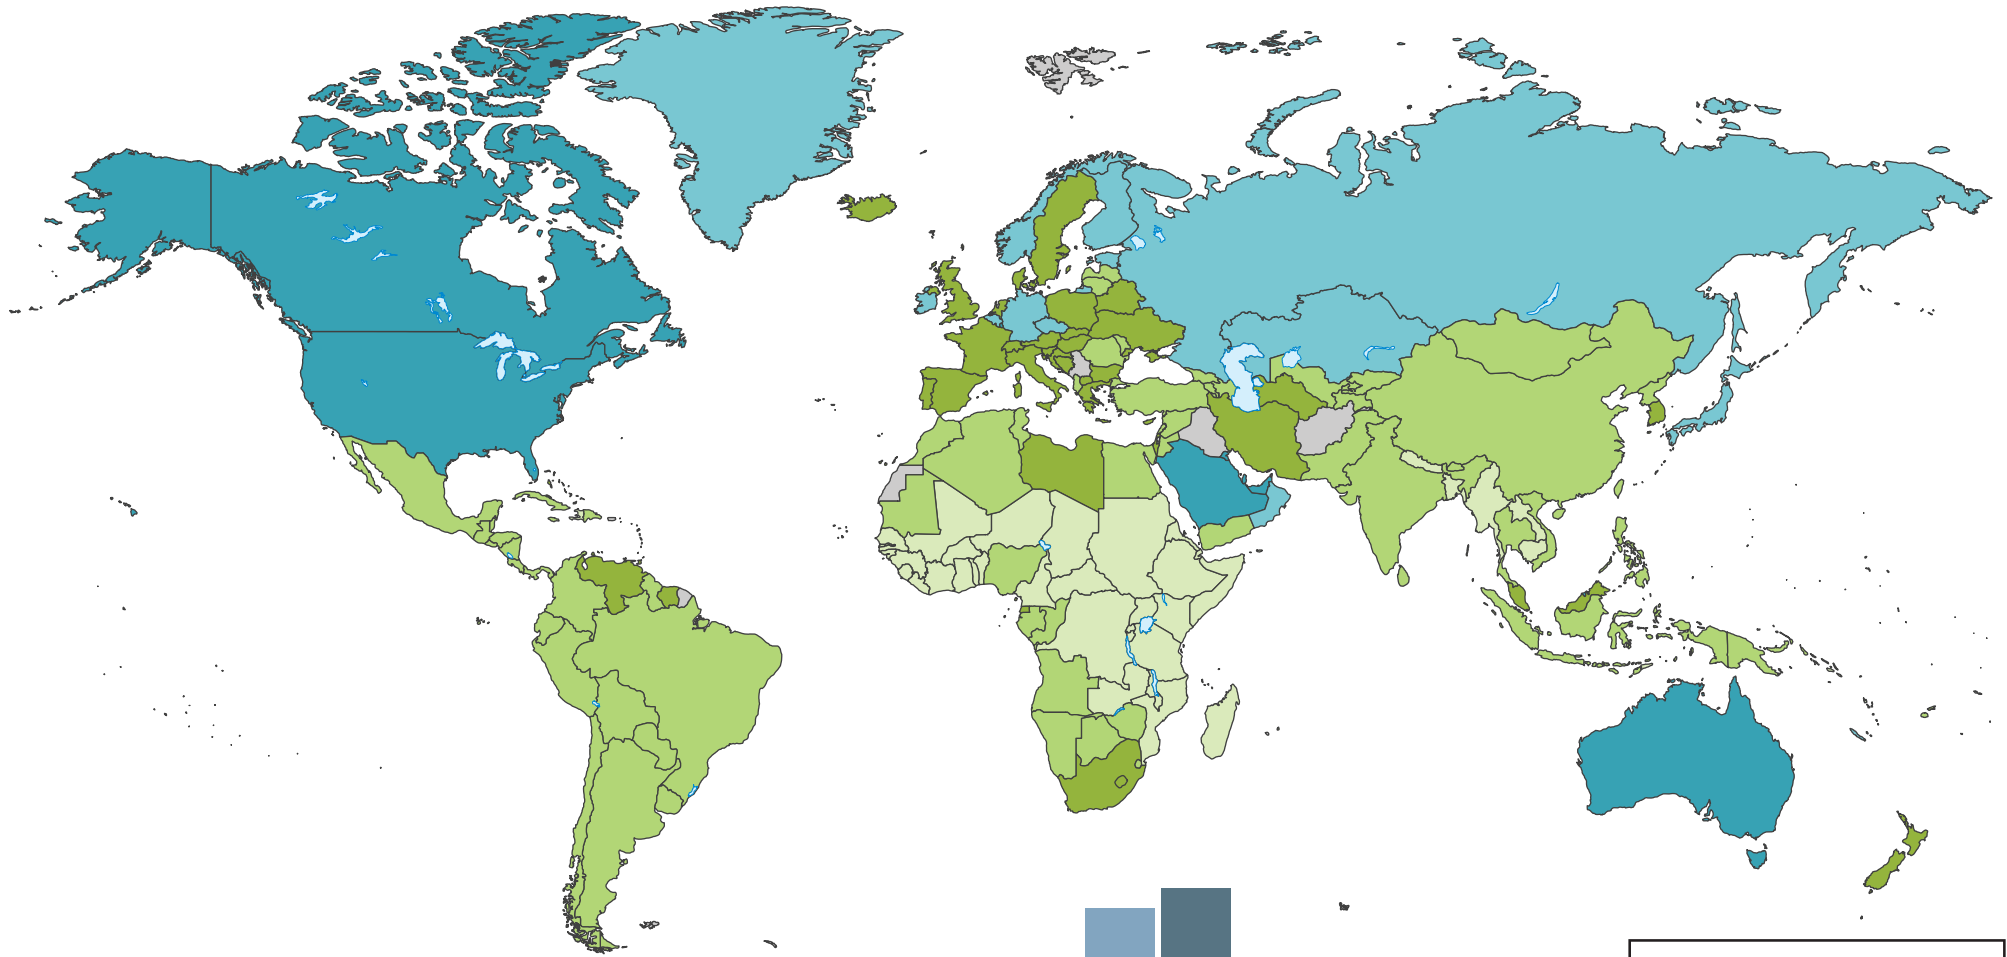

Access to an improved water source and improved sanitation facilities has increased, but in 2006, 884 million people still lacked access to a reliable source of water that was reasonably protected from contamination, and 2.5 billion people were still in need of improved sanitation services.

Goal 7: Ensuring Environmental Sustainability

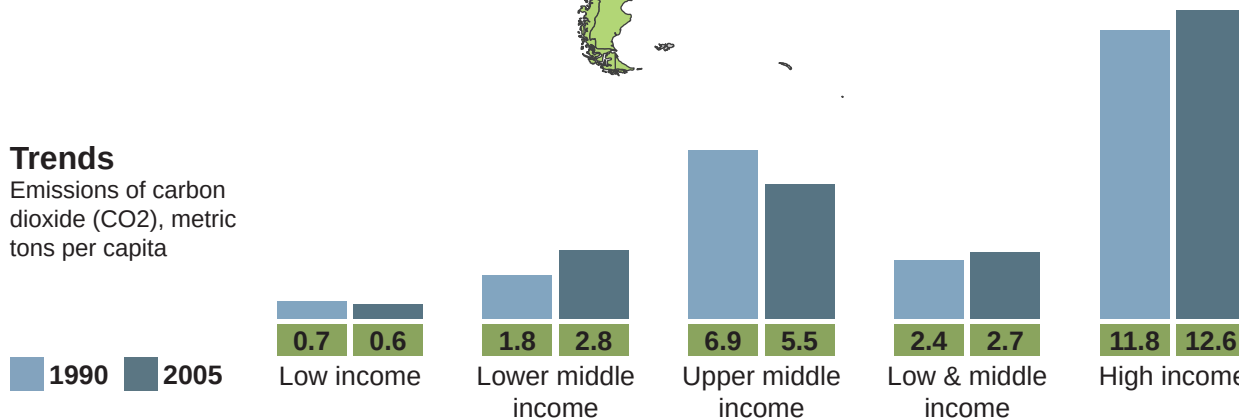

Integrate the principles of sustainable development into country policies and programmes and reverse the loss of environmental resources

Emissions of carbon dioxide (CO₂), a greenhouse gas that contributes to global climate change, have increased in most developing regions. But high-income economies remain the largest emitters of carbon dioxide.

Trends

Emissions of carbon dioxide (CO₂), metric tons per capita
