

Goal 6: Combating Disease

Have halted by 2015 and begun to reverse the spread of HIV/AIDS

AIDS is the leading cause of death in Sub-Saharan Africa and the fourth-largest killer worldwide. Almost 40 million people are living with HIV/AIDS, and the disease poses an unprecedented public health, economic, and social challenge.

Goal 6: Combating Disease

Have halted by 2015 and begun to reverse the incidence of malaria and other major diseases

Tuberculosis kills about 1.8 million people a year. It is the main cause of death from a single infectious agent among adults in developing countries. The rate of new cases is highest in Africa, where TB attacks those infected with HIV.
