

AI-Aware Assessment Framework

Product. Process. Defence.

Polish is not proof.

Polish

- ❖ Traditional online assessment is vulnerable because final products alone no longer prove learning.

Proof

- ❖ We are not catching students; we are making learning visible.

The Three Assessment Buckets

Product / Performance (50%)

The student can meet the learning outcome.

Process / Provenance (25%)

The student can show how the work was created.

Defence / Transfer (25%)

The student can explain, defend, and apply the learning.

This is the default program model. Do not change the weights based on AI level.

Defining Allowed AI Use

The Evidence Burden Matrix

	Level 0 (No AI)	Level 1 (Support)	Level 2 (Assisted)
Product (50%)	Same final task, written response, or project for all levels.		
Process (25%)	Planning sheet, outline.	Adds draft history, AI-use log, revision notes.	Adds prompt trail, AI transcript, verification table, revision rationale.
Defence (25%)	Short oral defence/conference.	Adds explanation of AI support.	Extended defence, live AI critique, transfer task.

Same outcome. Same weights. Different evidence burden.

Level 0: No AI

Level 1: AI Support

Level 2: AI-Assisted

**The level changes the evidence required, not the assessment weight.
The more AI contributes to the product, the more proof the student
must provide to validate ownership.**

AI Use is Earned, Not Automatic

Core Rule: Students must prove they can use AI ethically, transparently, and critically before accessing higher levels.

The AI Readiness Mini-Course

Assessment Note: Pass requires 80%+ knowledge check, a practical task showing original original thought, and accurate verification. Redo missing components instead of failing.

The Summative Workflow

No defence, incomplete summative.

Validity Gates and Grading Caps

If ownership is unclear, the teacher cannot fully validate the mark.

If (Validity Problem)	Then (Suggested Maximum)
Missing process evidence	
Weak process but strong product	
Level 2 work with no source verification	
Cannot explain major parts of work	
Undisclosed AI use	

Framework in Practice: Social Studies Unit

The Task

Alberta Issues
Summative

Analyze a contemporary
issue (e.g., Water and
agriculture, Indigenous
rights) using multiple
perspectives.

Weighted 50/25/25.

Level 0 Route

Final issue response + planning sheet +
short oral defence

Level 1 Route

Final response + planning sheet + AI-use
log + revision explanation + oral defence

Level 2 Route

Final report + prompt trail + annotated AI
output + verification table + revision
rationale + extended defence

The AI-Aware Assessment Blueprint

Making Learning Visible

“We are not trying to catch students using AI. We are building assessments where learning is visible even when AI exists. Every summative needs a product, a process trail, and a defence. Students can choose different AI-use routes, but more AI means more responsibility to prove ownership.”

Simple. Defensible. Usable.
